

# *Preoperative Care*

Adrian P. Ireland  
South Infirmary-Victoria University Hospital

# *Why is it important?*

- Regular job for the intern
- Important job for;
  - The intern
  - Team
  - Patient
  - Everyone!

# Outline

- Documentation
  - Consent
  - Drugs
  - Allergies
  - Correct side and site
  - Preoperative checklist
  - Optimisation of co-morbidities
  - Anaesthetic requirements
  - Surgical requirements
  - Prophylaxis
- 
-

# Documentation

- Clinical notes
  - Ensure patient is identified
  - Date and time and who you are representing
  - Legibility of notes, avoid ambiguous shorthand
  - Signature, with name in block capitals and bleep number underneath
- Consent
  - Also note what was discussed in the clinical notes

*If only you had told me doctor  
I never would have had the operation*

---

---

# Consent

- Risks / Benefits and Alternatives
  - See documentation regarding legibility
  - Risks
    - For any operation
      - Death, drug reactions, bleeding, infection, scar
      - Urinary retention, Deep venous thrombosis, Pulmonary embolism
    - From this operation
      - Varicose veins ; Cutaneous nerve injury, recurrence, chronic pain, limb swelling
      - Groin Hernia; Urinary retention, recurrence, pain at site, testicular atrophy
- 
-

# Drugs

- Stop
- Continue
- Make anaesthetic team aware
- Particular drugs
  - Anticoagulants
    - Aspirin, Clopidrogel, Warfarin, Heparin
  - Procoagulants
    - Oral contraceptive pill, ? HRT
- Allergies
  - When and what happened?

# *Marking the side and site*

- Need to avoid removing the wrong organ or limb!
  - Mark the side on the patient
    - Front, Back and Lateral (What position will the patient be in?)
  - Mark the site on the patient (eg a circle)
  - Indicate the side on the consent form (USE LEFT OR RIGHT AND NEVER L OR R)
  - Indicate the side in the clinical notes
- 
-

# *Pre operative checklist*

- Aviation industry, Military approach
  - Boring but less liable to error, Interns do not like it
  - Example
    - Documentation of the procedure in the clinical notes
    - Consent
    - Drugs check
    - Prophylaxis check DVT and antibiotic
    - Bowel preparation for certain operations
    - Results of relevant investigations in notes
    - Theatre and anaesthesia informed
    - ICU/ HDU bed booked
- 
-

# *Optomisation of co-morbidities*

- Paramedical staff
    - Physiotherapy, Occupational therapy, Clinical nutritionist, Rehabilitation physician
  - Nebulisers for asthma, obstructive pulmonary disease
  - Stabalisation of hypertension, diabetes
  - Rehydration
  - ? Significant Ischaemic heart disease, Renal failure, etc
  - Requires multidisiplinary input
- 
-

# *Anaesthetic requirements*

- Age and sex and history and clinical examination
  - FBC
  - U&E
  - CXR
  - ECG
  - Sickle cell screen

# *Surgical requirements*

- Keep anaesthesia happy or they will cancel the operation
  - FBC
  - U&E
  - ECG
  - CXR
  - Group and Hold or Group and Cross Match
  - Results of relevant investigations
- 
-

# *Ordering a test*

- Order it
- Make sure it is done
- Make sure the laboratory receive it
- Make sure you get the result
- Make sure you act on the result

# *Prophylaxis*

- Deep venous thrombosis
  - Hydration
  - Mobilisation
  - Subcutaneous heparin
  - TEDs
- Antibiotic
  - Usually at induction of anaesthesia
